1. Executive Summary

VIT Code Apex 3.0 was organized by the Artificial Intelligence Students' Forum (AISF) at Vishwakarma Institute of Technology (VIT), Pune. The event brought student teams together to develop technology-driven responses to practical and industry-relevant challenges. Its hybrid structure combined online screening and an online jury-pitch round with a 24-hour on-campus Grand Finale at VIT Bibwewadi Campus.

The event attracted 800+ registered teams representing 125 colleges. After the first-round screening, 532 teams advanced. Following the second-round online jury pitches, 104 teams were selected for the Grand Finale. The on-campus hackathon began at 11:00 AM and continued for 24 hours, with continuous evaluation reported during the finale.

Four tracks gave participants different routes into the competition: Emerson, iMocha, Open Innovation, and Technology for Social Impact powered by UST. The challenge themes ranged from AI-supported industrial diagram conversion and control-cabinet inspection to software quality assurance, skills evidence, workplace simulations, open problem-solving, cold-storage excursion warnings, indoor positioning, and sensor reliability.

The overall winners were Kala Dhua (first place), The Sapiens (second place), and Astranyx (third place). Their cash awards were ₹50,000, ₹30,000 and ₹20,000 respectively, each accompanied by a certificate. The total prize pool was ₹2,00,000, including overall cash awards, track-wise prizes and goodies. This report records the competition format, track themes, results, partner categories, documented impact and recommendations for future editions.

2. Introduction

Student hackathons provide a focused environment in which teams can turn an initial idea into a proposed or working technical solution. VIT Code Apex 3.0 used a staged competition model to give participants a path from proposal screening to live presentation and time-constrained implementation. The event emphasized technical creativity, problem understanding, feasibility and the ability to communicate a solution.

Organized by AISF at VIT Pune, Code Apex 3.0 brought together a large registration pool and teams from multiple colleges. The four-track design combined industry-defined problem statements with an open-innovation option. This helped accommodate participants interested in applied AI, software engineering, cloud systems, cybersecurity, data science, IoT, blockchain/Web3 and related emerging technologies.

2.1 Institutional and Event Context

The event identity, organizer and venue are retained as stated in the existing 3.0 report: VIT Code Apex 3.0, organized by the Artificial Intelligence Students' Forum (AISF), Vishwakarma Institute of Technology, Pune, with the Grand Finale at VIT Bibwewadi Campus. The reported finale dates are 24–25 October 2026.

2.2 Eligibility and Team Format

The participant handbook describes eligibility for engineering college students and teams of one to four members. The listed registration fee was ₹300 for VIT students and ₹300 plus GST for non-VIT students.

2.3 Scope and Evidence Standard

This report uses the 2026 report as the factual foundation and follows the prior report's broad institutional structure and documentation style. The prior report is used only as a model for section depth and presentation; its 2025 dates, venues, platforms, participant services, mentors, incidents, fees and winners are not carried into the 2026 account.

3. Objectives

3.1 Encourage Practical Problem-Solving

The multi-stage format was designed to move participants from explaining a concept to presenting a reasoned solution and then attempting implementation during the finale. The final stage gave selected teams a defined period to develop and demonstrate their proposed work.

3.2 Promote Technical Innovation

The event's broad technology focus and specialized tracks created opportunities to apply software and emerging technologies to industrial and social-impact problems. The named challenge themes emphasized practical use cases rather than a single programming language or technology stack.

3.3 Connect Students with Industry Challenges

The Emerson and iMocha tracks presented named industry-associated problem themes, while the Technology for Social Impact track was powered by UST. The Open Innovation track allowed participants to frame their own problem and solution. These formats offered different ways for students to engage with industry-relevant and self-defined challenges.

3.4 Develop Collaboration and Communication

A team-based hackathon requires participants to divide work, coordinate implementation and communicate decisions. Online jury pitching and final demonstrations placed presentation and explanation alongside technical work as visible parts of the competition.

3.5 Recognize Student Effort and Achievement

Overall awards and certificates recognized the top three teams. The stated prize pool also included track-wise awards and goodies. Track-wise winner names are not listed in this report because verified names were not present in the supplied final-report material.

3.6 Build a Multi-College Innovation Community

Participation from 125 colleges and the progression of selected teams through successive rounds gave the event a broad inter-college scope. The event also brought together the organizing body, partner organizations and participants around a common technology-focused activity.

4. Event Overview and Planning

Item	Recorded details
Event	VIT Code Apex 3.0
Organizer	Artificial Intelligence Students' Forum (AISF), VIT Pune
Grand Finale dates	24–25 October 2026
Venue	VIT Bibwewadi Campus, Pune
Competition format	Hybrid: online screening, online jury pitch, on-campus 24-hour Grand Finale
Grand Finale start	12:30 PM
Registered teams	800+
Round 1 qualifiers	532 teams
Grand Finale teams	104
College reach	125 colleges
Prize pool	₹2,00,000

4.1 Planning Scope

The event followed a three-stage structure, with online submissions, jury presentations and an on-campus Grand Finale. The event schedule and programme flow supported coordination across the competition stages and venue activities.

4.2 Timeline at a Glance

Date / time	Activity	Verified schedule detail
24 Oct, 8:00 AM	Reporting and registration	All teams were asked to report by 8:00 AM.
24 Oct, 9:00 AM	Opening ceremony / introduction	Opening programme; detailed inauguration flow is recorded separately below.
24 Oct, 10:00 AM	Hackathon briefing and guidelines	Briefing on the hackathon and guidelines.
24 Oct, 11:00 AM	Hackathon commencement	Start of the hackathon build period.
24 Oct, 3:00 PM	Mentoring Session 1	Mentoring session; scheduled sessions could run parallel to meal breaks.
24 Oct, 7:30 PM	Dinner	Meal listed in the official event schedule.
24 Oct, 8:00 PM	Mentoring Session 2	Mentoring session.
25 Oct, 7:30 AM	Breakfast	Meal listed in the official event schedule.
25 Oct, 8:00 AM	Mentoring Session 3	Mentoring session.
25 Oct, 11:00 AM	Hackathon concludes	End of the hackathon build period.
25 Oct, 11:15 AM	Project presentations and demonstrations	Presentations were also scheduled parallel to the lunch break.
25 Oct, 11:30 AM	Lunch	Meal listed in the official event schedule.
25 Oct, 4:00 PM	Valedictory ceremony	Closing / valedictory programme.

The detailed event-flow document lists hackathon commencement at 11:00 AM on 24 October and conclusion at 11:00 AM on 25 October. The schedule lists the valedictory ceremony at 4:00 PM on 25 October.

5. Competition Structure and Execution

5.1 Registration and Participation

The competition used a hybrid format in which teams progressed through online selection rounds before attending the on-campus finale. The participant handbook records eligibility for engineering college students and a team size of one to four members. It lists a registration fee of ₹300 for VIT students and ₹300 plus GST for non-VIT students.

The event used a registration-based competition format, with teams progressing through online rounds before selection for the on-campus Grand Finale.

Participation measure	Count	Meaning
Registered teams	800+	Total reported registration pool
Selected after Round 1	532	Teams progressing to the online jury pitch
Grand Finale teams	104	Teams selected after Round 2
Participating colleges	125	Reported institutional reach

5.1.1 Participation Progression

The aggregate counts show a narrowing funnel from registration to the final on-campus stage. The 532 figure represents teams selected after Round 1.

5.2 Round 1 – Online Screening

Round 1 served as the initial screening stage. Teams submitted their ideas and presentations for review. The existing 3.0 report describes the assessment focus as conceptual clarity, innovation potential, structured problem-solving and technical feasibility. The purpose of this stage was to identify proposals with sufficient clarity and potential to progress to a live jury pitch.

5.2.1 Submission and Review

Initial ideas and presentations were submitted online, providing the first stage of evaluation before teams progressed to the next round.

5.2.2 Shortlisting Outcome

From the 800+ registered teams, 532 teams were selected to progress beyond Round 1.

Documented element	Available 2026 information
Purpose	Initial review of proposed ideas and presentations
Assessment focus	Conceptual clarity, innovation potential, structured problem-solving, technical feasibility
Registration pool	800+ teams
Teams selected	532
Unverified operational detail	Exact submission format, submission count, evaluator roster, individual scores and feedback log

5.2.3 Documentation to Retain

For future editions and auditability, AISF may retain the final submission export, dated shortlist, scoring rubric, evaluator allocation and participant notification record. These are recommendations for recordkeeping, not assertions that a specific record was or was not maintained.

5.3 Round 2 – Online Jury Pitch

Round 2 was an online live presentation stage for teams shortlisted from the initial screening. Teams presented their proposals to a jury, allowing evaluators to examine the problem being addressed, the proposed approach, feasibility and the team's ability to communicate its solution. The 2026 report identifies 104 teams as selected finalists after this stage.

5.3.1 Purpose and Format

The jury-pitch format gave teams an opportunity to explain their solutions in a live setting and provided a bridge between idea screening and the final implementation period.

5.3.2 Evaluation Focus

The existing 3.0 report describes the online jury stage as assessing the problem, proposed approach, feasibility and communication. These are reported assessment principles rather than a complete official scoring rubric. A detailed weighted scorecard should be inserted only if the original 2026 judging template is available.

Area	What the report supports
Problem understanding	Teams presented the problem they intended to address
Proposed approach	Jury considered the proposed solution
Feasibility	Feasibility was part of assessment
Communication	Ability to communicate the solution was assessed
Final selection	104 teams advanced to the Grand Finale

5.3.3 Shortlisting Outcome

A total of 104 teams were selected for the Grand Finale.

5.4 Round 3 – On-Campus Grand Finale

The Grand Finale was the culmination of the three-stage competition and took place at VIT Bibwewadi Campus, Pune, on 24–25 October 2026. The event began at 11:00 AM and ran for 24 hours. A total of 104 finalist teams were selected to participate. The existing report records continuous evaluation during the finale, with teams implementing their proposed solutions and presenting demonstrations for final assessment.

5.4.1 Implementation and Demonstration

The finale shifted the emphasis from proposal explanation to building and demonstrating a solution within a fixed time window. Participants worked on their proposed projects and communicated progress and outcomes through demonstrations and presentations.

5.4.2 Opening and Event Presence

The existing report acknowledges Nandan Patel, Sandeep Chauhan and Dr. Ritesh Agrawal as guests at the opening ceremony. The report also includes a group photograph from the Grand Finale and an image of project presentation and evaluation. The exact sequence of inauguration activities, keynote remarks, jury rounds and closing proceedings is not documented in the supplied report.

The inauguration programme flow records a short welcome at 8:00 AM, Sponsor Session 1 by Verzii, the formal inauguration beginning at 10:00 AM, lamp lighting, the Chief Guest segment, the HOD’s address, memento handover, vote of thanks by the anchors, and hackathon guidelines and kick-off at 11:00 AM. The schedule separately lists the opening ceremony / introduction at 9:00 AM; the programme-flow document identifies the formal inauguration as beginning at 10:00 AM.

5.4.3 Continuous Evaluation

Continuous evaluation was a feature of the 24-hour finale, allowing assessment to take place throughout the event rather than only at the final presentation.

Figure 1. Grand Finale group photograph at VIT Bibwewadi Campus, Pune.

5.4.4 Event Photograph and Project Review

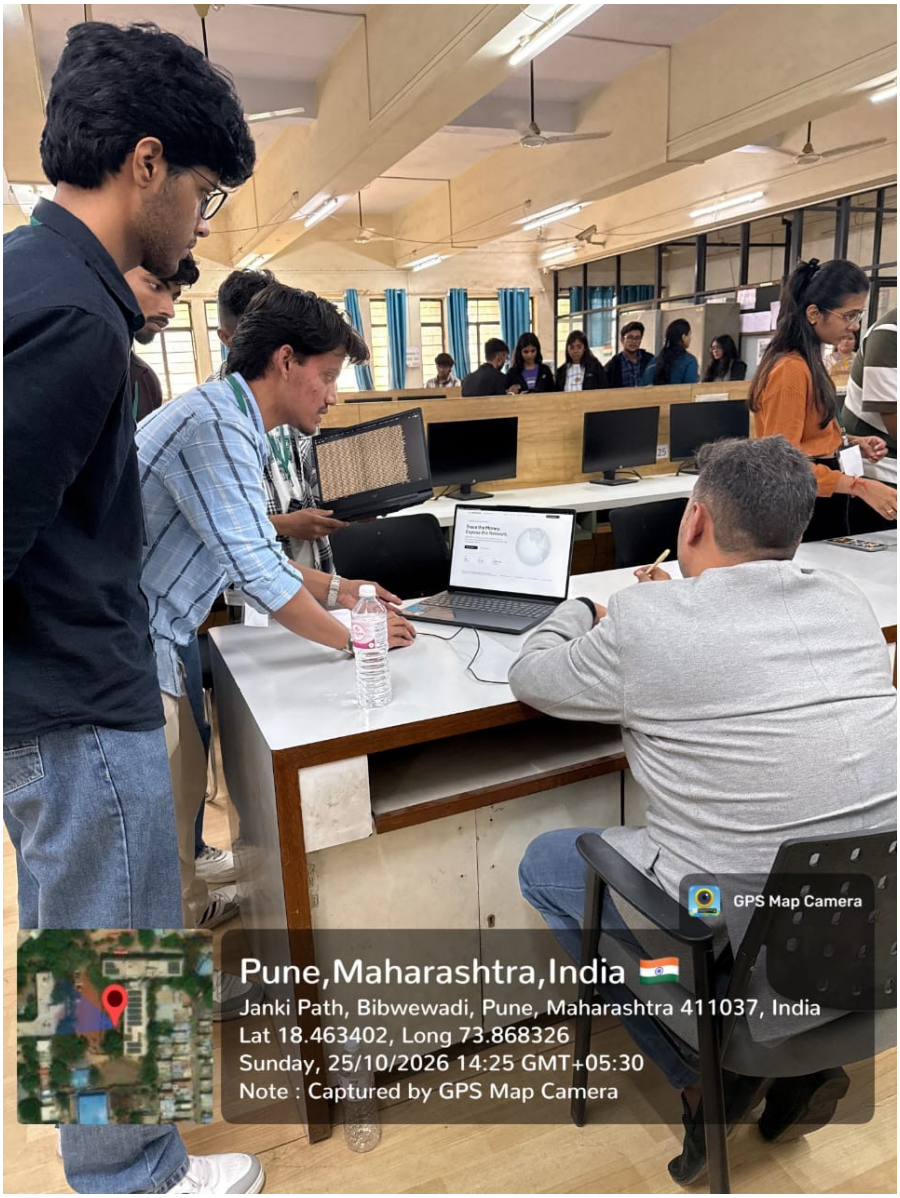

Figure 2. Project presentation and evaluation during the Grand Finale.

The supplied photograph documents a team presenting project work to a reviewer in the campus workspace. It provides visual evidence of a project-review setting, but it is not used to infer the identity of the team, the reviewer, the project title or the scoring outcome.

5.5 Round-wise Evaluation Criteria

The 2026 report gives a concise description of assessment principles but not a complete official rubric with weights or score ranges. The table below distinguishes those recorded principles from the specific documents needed to establish a formal rubric.

Round	Criteria / assessment principles documented in the 2026 report	Details not verified
Round 1 – Online screening	Conceptual clarity; innovation potential; structured problem-solving; technical feasibility	Weights, scoring scale, evaluator allocation, tie-break policy
Round 2 – Online jury pitch	Problem being addressed; proposed approach; feasibility; communication of solution	Pitch duration, Q&A duration, jury roster, weighted scorecard
Round 3 – Grand Finale	Ongoing review of progress; final solution demonstration and presentation	Detailed functionality/innovation/teamwork rubric, score aggregation, judging schedule

For transparent reporting, the criteria above should be treated as a summary of the report's descriptions, not as a verbatim reproduction of a signed judging rubric. AISF can replace or supplement this table with the official score sheets if they are available.

6. Tracks and Industry Problem Statements

The competition featured four tracks. Three were associated with named industry partners or a defined social-impact focus, while Open Innovation allowed teams to propose their own problems and solutions. The descriptions below preserve the themes recorded in the 2026 report; explanatory notes describe the nature of each theme without claiming that a particular team implemented a specific solution.

Track	Association	Recorded themes
Track 1	Emerson	UNTANGLE; SIGNAL SUDOKU; EAGLE EYE
Track 2	iMocha	Vibe Coding; Autonomous AI QA Engineer; Skill Passport; AI Job Simulator; Codebase Mentor
Track 3	Open Innovation	Team-proposed problem statements and solutions
Track 4	Technology for Social Impact, powered by UST	Cold-storage excursion prediction; indoor positioning; sensor trust, drift and false-alarm detection

6.1 Track 1 – Emerson

The Emerson-associated track included three named challenge themes. These addressed industrial process documentation, I/O allocation and control-cabinet inspection, using AI-oriented approaches.

Project UNTANGLE

Recorded theme: AI-based conversion of Piping and Instrumentation Diagram (P&ID) diagrams into simplified process sketches. The challenge focused on making information represented in technical diagrams easier to interpret in a simplified process view.

Project SIGNAL SUDOKU

Recorded theme: AI-assisted DeltaV I/O allocation and rule-based optimization. The challenge focused on assisting allocation decisions within an industrial control context.

Project EAGLE EYE

Recorded theme: AI vision-based quality inspection of control cabinets. This theme applied visual analysis to quality inspection.

The report retains Emerson as the industry partner associated with Track 1. No additional financial, mentoring or technical contribution is attributed without supporting documentation.

6.2 Track 2 – iMocha

The iMocha-associated track listed five challenge themes related to AI-assisted coding, software quality assurance, skills evidence, workplace simulation and codebase understanding. The summaries below follow the theme names and descriptions in the existing 3.0 report.

Vibe Coding

Recorded theme: AI-era coding assessment involving AI-assisted development, candidate-journey tracking and skills reporting. The emphasis is on assessment in a workflow where AI tools may be used as part of development, rather than on code output alone.

Autonomous AI QA Engineer

Recorded theme: an agent that explores web applications, generates and runs tests, and reports bugs with evidence. The theme combines application exploration, test execution and evidence-backed defect reporting.

Skill Passport

Recorded theme: an AI-powered verified skill profile built from real work, with evidence-based skills, role matching and personalized learning paths. The focus is on linking skill claims to evidence and using that evidence to support role alignment and learning recommendations.

AI Job Simulator

Recorded theme: workplace simulation and evidence-based feedback.

Codebase Mentor

Recorded theme: AI assistance for understanding unfamiliar codebases.

These are the challenge themes recorded in the 2026 report. No team-to-challenge mapping or implementation outcome is asserted in the absence of a verified results sheet.

6.3 Track 3 – Open Innovation

Open Innovation invited teams to propose their own problem statements and solutions. This format gave participants room to identify a problem, define its scope and explain why their approach was appropriate.

6.4 Track 4 – Technology for Social Impact, powered by UST

This track grouped three recorded technical themes where reliability, prediction or positioning can support practical and socially relevant applications.

Cold-Storage Excursion Prediction and Early Warning

Recorded theme: an AI-based predictive system to identify cold-storage excursions and provide early warnings.

Indoor Positioning with Sparse Infrastructure and Noisy Measurements

Recorded theme: AI-based indoor positioning where infrastructure is limited and measurements are noisy.

Sensor Trust, Drift and False-Alarm Detection

Recorded theme: AI-based detection of sensor trust issues, drift and false alarms. This theme focused on assessing sensor reliability and identifying signals that may require attention.

6.5 Track Design Summary

The four tracks balanced partner-defined problem statements and participant-led exploration. The report associates Emerson with Track 1, iMocha with Track 2 and UST with the Technology for Social Impact track. Kirloskar is listed as an industry partner, but no separate track mapping is specified in the available report.

7. Event Operations and Participant Support

The operational footprint included the on-campus Grand Finale at VIT Bibwewadi Campus, Pune, a 24-hour duration, and continuous evaluation. The photographs document a group gathering and a project-review environment.

The event schedule lists breakfast, lunch and dinner for participants on the two event days. It also lists three mentoring sessions: Session 1 at 3:00 PM and Session 2 at 8:00 PM on 24 October, and Session 3 at 8:00 AM on 25 October. The schedule notes that mentoring sessions could run parallel to scheduled meal breaks and that Day 2 project presentations could also run parallel to lunch.

The inauguration was held in the auditorium. The hackathon workspaces were Lab 3007-A, Lab 3108-A, Lab 3108-B, and classrooms 3303, 3304, 3305 and 3306. Accommodation was arranged in Room 3105 for boys and Room 3106 for girls.

Operational area	Confirmed record	Additional record that would strengthen documentation
Venue	VIT Bibwewadi Campus, Pune	Inauguration: auditorium; hackathon: Labs 3007-A, 3108-A, 3108-B and classrooms 3303–3306
Accommodation	Rooms 3105 and 3106	Room 3105 for boys; Room 3106 for girls
Duration	24 hours; began at 12:30 PM	Official schedule lists hackathon commencement at 11:00 AM on 24 October and conclusion at 11:00 AM on 25 October; reconcile the reported 12:30 PM start before final circulation
Evaluation	Continuous evaluation recorded	Judge duty roster, score sheets and evaluation intervals
Participant support	Meals and mentoring listed in schedule	Breakfast, lunch and dinner on both days; three mentoring sessions are scheduled
Connectivity / power	No 2026 incident or infrastructure specification supplied	Network plan, backup arrangements and incident register
Mentorship	Three mentoring sessions listed	Mentor names, affiliations and session records

7.1 Participant Communication

The event stages required participants to follow deadlines, submission requirements, selection results and on-campus instructions. The report records the competition stages and selection counts.

7.2 Recordkeeping Recommendations

For future editions, a consolidated event folder can include the final schedule, participant instructions, contact tree, volunteer assignments, venue checklist, connectivity plan, judge roster, emergency contacts and post-event records.

8. Challenges and Mitigation Strategies

The existing 2026 report identifies coordination across online submissions, jury presentations and a continuous 24-hour on-campus finale as important operational considerations. It also notes that the multi-stage format helped organize submissions into evaluation stages, defined tracks gave teams direction, and continuous evaluation supported progress monitoring and timely feedback.

Operational planning for future editions can include contingencies for power, accommodation, technical incidents and participant services.

Consideration recorded	Response / design feature recorded	Outcome supported by report
Large registration pool	Multi-stage screening process	532 teams advanced from Round 1
Online proposal assessment followed by live pitches	Separate online screening and jury-pitch stages	104 teams selected for the Grand Finale
Multiple challenge domains	Four defined tracks including Open Innovation	Participants could select an industry-defined or self-defined challenge
Long-duration finale	Continuous evaluation during the 24-hour event	Progress and final demonstrations were assessed
Need to communicate technical work	Presentation and demonstration stages	Teams presented proposed and implemented solutions

8.1 Limits of the Evidence

The table summarizes features of the event design rather than incident-response case studies. There is insufficient 2026 evidence to report incident time, root cause, mitigation owner or recovery duration. The report therefore avoids claiming that a specific operational crisis occurred or was resolved.

8.2 Future Risk-Management Recommendations

- Maintain a dated incident log with the issue, impact, responsible contact, action taken and closure time.
- Retain a version-controlled schedule and a single official channel for deadline and venue updates.
- Document backup arrangements for connectivity, power, presentation equipment and access to project submissions.
- Keep judging criteria, score sheets and result approvals together for traceability.

9. Winners and Recognition

The 2026 report records three overall winning teams. Each listed position carries a cash award and certificate. The total of the three overall cash awards is ₹1,00,000; the total prize pool for the event was ₹2,00,000, inclusive of track-wise prizes and goodies.

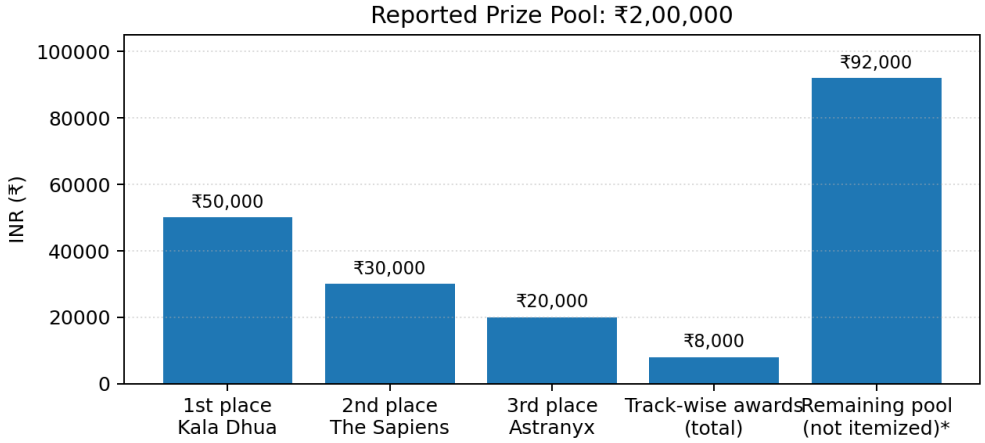

Figure 7. Prize-pool overview. The total prize allocated to track-wise winners was ₹8,000 across the winning teams; the remaining ₹92,000 after overall awards and track-wise awards is not itemized in the available records.

Position	Team	Award recorded
1st Place	Kala Dhua	₹50,000 cash prize and certificate
2nd Place	The Sapiens	₹30,000 cash prize and certificate
3rd Place	Astranyx	₹20,000 cash prize and certificate

Award measure	Amount / detail
First-place cash award	₹50,000
Second-place cash award	₹30,000
Third-place cash award	₹20,000
Combined overall cash awards	₹1,00,000
Total prize for all track-wise winners	₹8,000
Remaining prize-pool allocation (not itemized)	₹92,000
Total event prize pool	₹2,00,000

9.1 Recognition Beyond Overall Awards

The total prize allocated to track-wise winners was ₹8,000 across the winning teams. The six recognized track-winning teams were: one winner each for Emerson, iMocha and Open Innovation, and three ranked winners for Technology for Social Impact powered by UST. The available information does not specify how the ₹8,000 was divided among these teams. After the ₹1,00,000 in overall cash awards and ₹8,000 in track-wise awards, the remaining ₹92,000 of the ₹2,00,000 prize pool is not itemized in the available records; no further allocation is assumed.

The track-wise winning teams provided by the organizers are: Emerson — Quadruple; iMocha — Unified Memory; Open Innovation — NPC Prime; and Technology for Social Impact powered by UST — 1st place V/Slash, 2nd place Kirmada and 3rd place Luminious. The total prize allocated to all track-wise winners was ₹8,000; the individual distribution among these six teams was not specified.

9.2 Award Documentation

The report records the overall winning teams and award amounts. To complete the formal award record, AISF may attach the approved results sheet, certificate copies or award-distribution photographs if these are available. No unsupported team member names or individual prize-receipt details are included.

10. Sponsors, Powered-by Partners, and Industry Collaborations

The report distinguishes powered-by partners, sponsors and industry partners. These categories are preserved below.

Category	Organizations listed
Powered by	Verzii; Co; iMeche
Sponsors	OSEN; Wet n Joy; Mad Over Donuts; IEEE Pune Section; IEEE CTSoc; IEEE Foundation
Industry partners	Emerson; iMocha; UST; Kirloskar

10.1 Track Associations

Organization	Association recorded in the report
Emerson	Industry partner associated with Track 1 and its three named problem themes
iMocha	Industry partner associated with Track 2 and its five named challenge themes
UST	Powered the Technology for Social Impact track
Kirloskar	Listed as an industry partner; no specific track mapping is stated
Verzii, Co, iMeche	Listed as powered-by partners
OSEN, Wet n Joy, Mad Over Donuts, IEEE Pune Section, IEEE CTSoc, IEEE Foundation	Listed as sponsors

10.2 Sponsor and Partner Documentation

The event branding image contains multiple partner marks and is retained in the report. The written category list follows the event's partner categories.

10.3 Contribution Records to Add if Available

- Written sponsor confirmations or agreements specifying the permitted category and contribution.
- Approved logo files and brand-use requirements.
- Confirmed descriptions of technical support, prizes, mentorship, in-kind support or other deliverables.

Financial Reporting Summary (To Be Completed)

The total prize pool is reported as ₹2,00,000. Detailed event income and expenditure figures have not been supplied yet. The tables below are intentionally left blank for AISF's finance team to complete from approved records; no financial amounts have been estimated.

Income / Funding Source	Amount (₹)	Evidence / Notes
Registration collections	_____	_____
Cash sponsorship / donations	_____	_____
In-kind support (record separately)	_____	_____
Other confirmed income	_____	_____
Total income	_____	_____

Expenditure Breakdown

Expense Category	Amount (₹)	Evidence / Notes
Overall cash prizes	_____	_____
Track prizes and goodies	_____	_____
Food and refreshments	_____	_____
Accommodation / facilities	_____	_____
Printing, branding and materials	_____	_____
Technical / operational expenses	_____	_____
Other approved expenses	_____	_____
Total expenditure	_____	_____

Financial Reconciliation

Summary Metric	Amount (₹)
Total income	_____
Total expenditure	_____
Net balance / surplus / deficit	_____
Prepared by / date	_____

Finance note: Complete this section after reconciling receipts, invoices, sponsorship records and approved expense statements. Record in-kind support separately from cash income.

10.4 Financial Reporting Summary (To Be Completed)

The total event prize pool is reported as ₹2,00,000. Detailed income and expenditure figures have not yet been provided. Complete the tables below from AISF's approved finance records; no unknown values have been estimated.

Income / Funding Source	Amount (₹)	Evidence / Notes
Registration collections	_____	_____
Cash sponsorship / donations	_____	_____
In-kind support (record separately)	_____	_____
Other confirmed income	_____	_____
Total income	_____	_____

Expenditure Breakdown

Expense Category	Amount (₹)	Evidence / Notes
Overall cash prizes	_____	_____
Track prizes and goodies	_____	_____
Food and refreshments	_____	_____
Accommodation / facilities	_____	_____
Printing, branding and materials	_____	_____
Technical / operational expenses	_____	_____
Other approved expenses	_____	_____
Total expenditure	_____	_____

Financial Reconciliation

Summary Metric	Amount (₹)
Total income	_____
Total expenditure	_____
Net balance / surplus / deficit	_____
Prepared by / date	_____

Finance note: Complete this section after reconciling receipts, invoices, sponsorship records and approved expense statements. Record in-kind support separately from cash income.

11. Outcomes and Impact

11.1 Participation and Reach

The event attracted 800+ registered teams from 125 colleges. A total of 532 teams progressed after Round 1, and 104 teams were selected for the Grand Finale. These figures show a large initial participation pool and a structured progression to the final on-campus event.

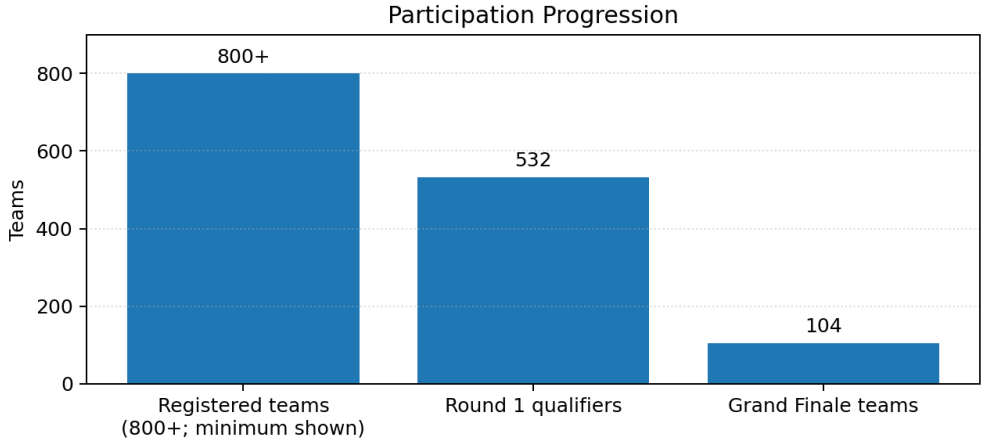

Figure 6. Participation progression. The registered-team bar represents the reported figure of 800+ teams.

Indicator	Reported value
Registered teams	800+
Round 1 qualifiers	532
Grand Finale teams	104
Participating colleges	125
Grand Finale duration	24 hours
Prize pool	₹2,00,000

11.2 Industry-Oriented Problem Exposure

The four-track structure connected participants with industrial and social-impact problem themes. Emerson-associated challenges focused on industrial diagrams, I/O allocation and visual inspection; iMocha-associated themes covered software assessment, QA, skill evidence and codebase understanding; the social-impact track focused on cold storage, indoor positioning and sensor reliability; Open Innovation enabled participant-defined problem selection.

11.3 Technical Communication and Demonstration

The online jury-pitch round and the final presentation stage required teams to explain their problem, approach and solution. The event report records demonstrations and presentations as part of final assessment. The supplied project-review photograph provides visual documentation of an evaluation interaction.

11.4 Recognition and Ecosystem Engagement

Overall awards, certificates, track-wise prizes and goodies formed the event’s recognition structure. The involvement of industry partners and sponsors created a collaborative event framework.

12. Key Learnings and Recommendations

12.1 Multi-Stage Screening

A sequence of online screening, live jury pitches and an on-campus finale provides a way to review a large registration pool before allocating the intensive final-stage opportunity. For future editions, the organizer can retain stage-by-stage counts and exact submission totals so the participation funnel can be reported precisely.

12.2 Clarity of Challenge Statements

The event used both named industry challenges and an open-innovation track. Future documentation can strengthen consistency by retaining a canonical problem statement for each challenge, including scope, expected deliverables, constraints and the judging rubric approved by the track owner.

12.3 Transparent Evaluation Records

Publishing a clear rubric to participants and preserving a signed result record can make the process easier to explain and audit.

12.4 Operational Documentation

A 24-hour on-campus event benefits from a single schedule and documented roles. For future editions, AISF should retain venue and technical checklists, volunteer assignments, contact information, issue logs and a post-event closeout note. These recommendations do not imply that any particular facility or incident was missing during the event itself.

12.5 Partner and Award Records

Sponsor categories, industry associations and overall awards are recorded in this report. A partner-contribution matrix and a complete approved award sheet would make it easier to distinguish branding, track ownership, prize support and other contributions without inference.

12.6 Future-Edition Improvement Checklist

- Record exact registrations and completed submissions separately.
- Retain the dated shortlist for each round and final result approval.
- Archive jury names, affiliations, evaluation rubrics and score sheets.
- Store the final event run sheet and confirmed participant-support details.
- Collect optional participant feedback with a documented method and response count.
- Maintain approved sponsor contribution descriptions and award-distribution evidence.

13. Conclusion

VIT Code Apex 3.0 provided a structured platform for student teams to engage with technology-driven problems through online screening, online jury pitches and a 24-hour on-campus Grand Finale. Its reported reach—800+ registered teams, 532 teams advancing after Round 1, 104 finalists and participants from 125 colleges—demonstrates the scale of the event.

The four-track design combined industry-associated themes, a social-impact track powered by UST and open innovation. The overall awards recognized Kala Dhua, The Sapiens and Astranyx, while the total prize pool was reported as ₹2,00,000. The event's value is reflected in the opportunity it created for participants to frame problems, communicate proposed approaches and demonstrate project work.

This report brings together the event format, schedule, competition tracks, results, partners, operations, outcomes and recommendations for future editions.

14. Acknowledgments

AISF, VIT Pune, extends its appreciation to the participating teams for their effort and engagement, and to the organizing team and volunteers involved in delivering the event. Gratitude is also extended to the judges, mentors, faculty members, institutional administration, sponsors and industry partners whose involvement supported the event framework.

Special acknowledgment is extended to the opening-ceremony guests named in the existing report: Nandan Patel, Sandeep Chauhan and Dr. Ritesh Agrawal. The report also acknowledges the powered-by partners Verzii, Co and iMeche; sponsors OSEN, Wet n Joy, Mad Over Donuts, IEEE Pune Section, IEEE CTSoc and IEEE Foundation; and industry partners Emerson, iMocha, UST and Kirloskar.

The closing / valedictory ceremony guests were Chief Guest Niranjan Kale and Guest of Honour Nirup Satpati.

This acknowledgment records the stakeholder categories and names associated with the event.

Appendix A – Participation Statistics

Metric	Reported figure	Notes
Registered teams	800+	Reported registration figure.
Teams selected after Round 1	532	Advanced to the online jury-pitch stage.
Grand Finale teams	104	Selected after Round 2.
Participating colleges	125	Reported institutional reach.
Overall first-place award	₹50,000	Kala Dhua; certificate also recorded.
Overall second-place award	₹30,000	The Sapiens; certificate also recorded.
Overall third-place award	₹20,000	Astranyx; certificate also recorded.
Combined overall cash awards	₹1,00,000	Sum of the three reported overall cash awards.
Total prize pool	₹2,00,000	₹2,00,000; includes ₹1,00,000 overall awards and ₹8,000 total track-wise awards; remaining ₹92,000 not itemized.
Grand Finale duration	24 hours	On-campus; began at 12:30 PM.

Appendix B – Event Timeline

Date / time	Stage / activity	Confirmed detail
24 Oct, 8:00 AM	Reporting and registration	All teams were asked to report by 8:00 AM.
24 Oct, 9:00 AM	Opening ceremony / introduction	Opening programme; detailed inauguration flow is recorded separately below.
24 Oct, 10:00 AM	Hackathon briefing and guidelines	Briefing on the hackathon and guidelines.
24 Oct, 11:00 AM	Hackathon commencement	Start of the hackathon build period.
24 Oct, 3:00 PM	Mentoring Session 1	Mentoring session; scheduled sessions could run parallel to meal breaks.
24 Oct, 7:30 PM	Dinner	Meal listed in the official event schedule.
24 Oct, 8:00 PM	Mentoring Session 2	Mentoring session.
25 Oct, 7:30 AM	Breakfast	Meal listed in the official event schedule.
25 Oct, 8:00 AM	Mentoring Session 3	Mentoring session.
25 Oct, 11:00 AM	Hackathon concludes	End of the hackathon build period.
25 Oct, 11:15 AM	Project presentations and demonstrations	Presentations were also scheduled parallel to the lunch break.
25 Oct, 11:30 AM	Lunch	Meal listed in the official event schedule.
25 Oct, 4:00 PM	Valedictory ceremony	Closing / valedictory programme.

The schedule records the event's key stages, including the Grand Finale and award ceremony.

Appendix C – Track and Award Summary

Track	Partner / designation	Named problem themes in the report
Track 1	Emerson	Project UNTANGLE; SIGNAL SUDOKU; EAGLE EYE
Track 2	iMocha	Vibe Coding; Autonomous AI QA Engineer; Skill Passport; AI Job Simulator; Codebase Mentor
Track 3	Open Innovation	Teams propose their own problem statements and solutions.
Track 4	Technology for Social Impact, powered by UST	Cold-storage excursion prediction and early warning; indoor positioning with sparse infrastructure/noisy measurements; sensor trust, drift and false-alarm detection.

Overall Award Summary

Position	Team	Cash award	Other recognition recorded
1st	Kala Dhua	₹50,000	Certificate
2nd	The Sapiens	₹30,000	Certificate
3rd	Astranyx	₹20,000	Certificate

The track-wise winners are Quadruple (Emerson), Unified Memory (iMocha), NPC Prime (Open Innovation), and V/Slash, Kirmada and Luminious (UST, ranked first, second and third respectively). The total prize allocated across track-wise winners was ₹8,000; individual amounts were not specified. The remaining ₹92,000 of the prize pool after the overall awards and track-wise award total is not itemized in the available records.

Appendix D – Event Documentation

Figure 3. Code Apex 3.0 event display flex and partner branding.

The event display flex is retained as the visual record of event identity and partner branding. Logos are reproduced as part of the supplied artwork; logo presence is not used to infer a specific financial or in-kind contribution.

Figure 4. Grand Finale group photograph, dated in the image metadata as 25 October 2026.

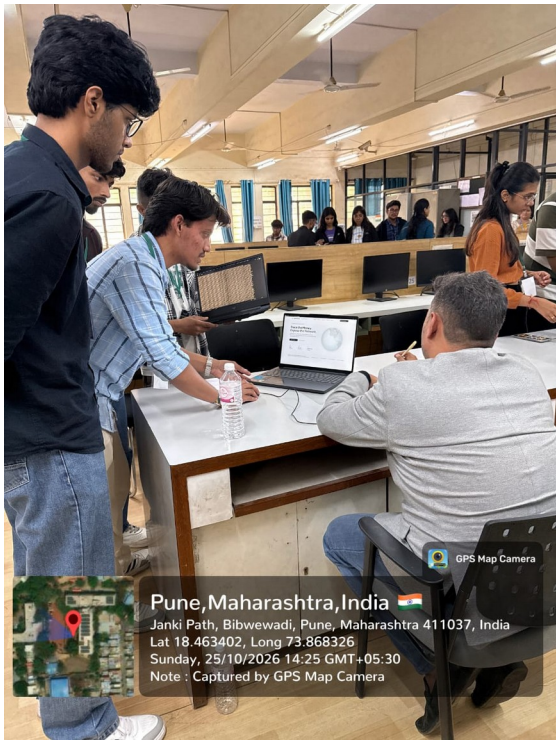

Figure 5. Project presentation and evaluation photograph, dated in the image metadata as 25 October 2026.

The supplied images document the event setting, a group gathering and a project-review interaction.

The event schedule and inauguration programme flow are retained as supporting records for the timeline and ceremony descriptions, including meal provision and mentoring-session times.
